

Coke Oven Batteries

A coke oven battery is a complex structure of many different refractory shapes, but it can be divided in general into two sections; the regenerators which are the lower section, and the coking and combustion chambers which represent the upper section. The refractories used require good mechanical strength, thermal shock resistance abrasion resistance, volume stability, and in the upper section good hot strength.

ASF40UR REFRACTORIES has been offering our customers a wide range of refractory and insulation solutions to serve our Coke Oven battery customers around the region. Our ability to offer quality and customized solutions has helped us set our footprints in Coke Oven Batteries.
